Sir,

Sub: UBA-Analysis of water samples of five villages at chemistry department – reg.

This is to bring to your notice that ANITS is participating in UBA village service and had adopted five villages under this scheme. To expand this survey on water management in five villages, we are planning to analyze the quality of water in the five villages and collected water samples for testing. In this regard, we request you to permit testing the samples in the Chemistry laboratory.

Hence we kindly request you to give permission to analyze the water samples under UBA scheme of these five villages.

Thanking you

Yours sincerely

UBA project Report – ANITS (C-24171)

As a participating institute of UBA project ANITS (Anil Neerukonda Institute of Technology and Sciences) Visakhapatnam(C-24171), in the month of November 2019 conducted a field survey in all the five adopted villages. The field survey was administered through the questionnaire designed by UBA team IIT New Delhi, to get an idea on the issues, challenges and problems to identify the gaps pertaining to rural technology transformation.

ANITS UBA team has conducted village survey and household survey with NSS students in Tagarapuvalasa, Tallavalasa, chittivalasa, Nammivanipeta and Sanghivalasa. Our Non-teaching staff has taken initiative and collected the data related to village survey. Our students has participated in household survey two times a week. Through the survey ANITS - UBA team found that these villages viz. have lot of potential in terms of virtual education for school children, rain-water harvesting and portable drinking water facilities.

To encourage virtual education, two training programmes were organized in Nammivanipeta and Sanghivalasa Villages and 40 students received the training from each village. The training programme was a success and enabled students to learn through multiple intelligences such as logic, linguistic, interpersonal and musical by means of different short videos, animations etc. Also conducted certain competitions and distributed prizes to winners and books & pens to all students.

Based on village survey reports on ground water, two of subject experts from civil engineering department of ANITS had visited Nammivanipeta village conducted field survey and concluded that the level of ground water is very low. A proposal is submitted to UBA team for construction of rain-water harvesting pits in that village.

Based on village survey reports on drinking water problem, subject experts from chemical engineering department had visited Nammivanipeta and Sanghivalasa villages collected water samples for chemical analysis and concluded the water inappropriate for drinking. A proposal is submitted to UBA team for transformation of untreated water to portable water using low cost ceramic membranes.

Apart from the village and household surveys, our students has organized and participated in making villages plastic free, hygienic and clean environment. The students has also distributed cloth bags at shop outlets and conducted rally to encourage people to avoid single use plastic covers. Another important gap was health and hygiene. ANITS - UBA team taken initiatives like door to door awareness

7. Objectives of the project (50 words):

The municipal water supply to the village, Nammivani Peta still contains characteristics of odor and colour which is not utilized by the village people for drinking purpose. In view of this, the people used the water only for cleaning and washing purposes. Further, the properly not treated water may cause various diseases for human beings which underlines the need for an enhancement of quality in the supplied municipal water. In other hand, the people of the village is scarce of ground water.

8. Experience in the field of the PI: 12

9. Brief plan of activities (100 words):

For drinking purpose, the people rely on commercial mineral water supply which is a burden to the common people in terms of cost. Therefore, there is a need to enhance the quality of the municipal supply water. This village is around one kilometer away from the college. So, the expert team of Department of Chemical Engineering of Anil Neerukonda Institute of Technology and Sciences (ANITS) studied the problem of supplied water and the same was explained to village people and the panchayat members/officials. Then the mitigation of the existed water supply problem may be solved using the laboratory fabricated low cost ceramic membranes which are the part of membrane technology. These low cost ceramic membranes are amicable for environment as well as good for the society in terms of giving potable water. The cost and efficiency of these membranes are proved in the reputed journals (Kaniganti et.al)

12. Cost of the facility: 1,00,000

13. Breakup of expenditure:

Cost for each system the stainless steel mould, hand operated hydraulic press machine, batch reactor and manpower as well as power consumption for fabrication of ceramic membranes are Rs.10,000, Rs. 25000, Rs.15000 and Rs.50000 respectively for one unit.

14. Project deliverables (product /process/ improvement / capacity building etc.):

Product:

- The prototype fabricated mould, batch reactor and ceramic membranes are ready to do filtration.
- Then maintenance of the system will be monitored by our institution for every one month.
- The same units will be useful for various villages especially those villages demand development in terms of providing the potable water.

Process:

- The proposed ceramic membrane technology is comes under microfiltration which can provide the better results in terms of flux and low fouling.
- Moreover, this technology is eco-friendly in comparison to the most used polymer based membranes which are available in commercial water purifiers.

- This project can be implemented within the budgetary limit of Rs. 1, 00, 000/- and also try for some other funding sources through village secretary and Zonal municipal Commissioner, GVMC, Bheemunipatnam, Visakhapatnam are helpful to enhance the quality of water with high efficiency set up.

Improvement:

- The quality of untreated water which was collected at Nammivanipeta Village for the analysis prior to ceramic membrane filtration.
- Based on the Indian standards and WHO guidelines, the preliminary study of collected water was analyzed and also differentiated from these standards.
- The analysis also provides results for the same sample after ceramic membrane filtration which will definitely enhance the quality of water as well as meets the Indian Standards.

Capacity Building:

- This technology shall be developed within the budgetary limits of UBA and the system will be useful for 50 families like nearby people.

***Note:** The students will work voluntarily for conducting experiments for analysis without motive of any profit. Up to four units can be installed over the village.

15. Availability of funds from other sources: Nil

16. Duration of the work (in terms work plan): One Year

17. Impact of the Project on Village:

- Living ambience especially public health, potable water and proper sewage disposal will enhance.
- Sanitation at residential/industrial areas will pay the attention towards good health.
- Mitigation of water borne diseases with latest membrane technology.
- The specialized committee will anticipate and monitor the control of various issues.
- Illustrate an experimental setup and analysis of water to the people/leaders of various wards under any scheme related to Panchayat, State and Central Government.

TITLE: ENHANCE THE VIRTUAL EDUCATION SYSTEM FOR PRIMARY SCHOOL CHILDREN IN RURAL DEVELOPMENT SECTOR

Village where it is to be implemented: NMMIVANI PETA

Project Objective:

The main objective of this project is to enhance the education system of primary school children in rural development sectors. The main motto of this project is to initiate the community to provide support in education, to increase the enrollment of school childrens, to change the life condition and learning style and to empower the family economically. Virtual Technology is a very important and useful pedagogy that offers new approaches for the purpose of education. It is a computerized system in which it shows all types of models such as animations, picturalizations, vocabulary pronunciation and so on. Based on this project, children not only create interest in subject content but also they can improve communication skills and analytical thinking.

Justification:

Schooling is an integral part of career that parents tend to choose for their children. In Rural areas due to lack of technology, education system becomes low priority. In order to improve the education system and create interest among children, virtual technology has been proposed.

Unfortunately, major sector of parents who persuade their kids to schooling come from functionally illiterate background. Children who may not receive powerful mentorship from their parents and tutors lack adequate knowledge. Traditional teaching methodology empowers live lecturing to students but fostering a virtual learning environment will boost imaginative skills and memory retention power among children. Hence virtual technology aids students to read and write in an improvised mechanism. Shifting the responsibility of parents and teachers to automated software ensures a better environment for learning. Thereby, Literacy opportunity will be expanded in economically low regions.

Brief Plan of activities and implementation timeline:

- Conduct a school survey for teacher, students and on facilities.
- Check the level of learning for students
- Collect and gather materials and tools up to class V.
- Design virtual technology software which includes animations, picturalization, vocabulary pronunciation and so on with the help of NSS volunteer, faculty and students.
- Organize the training programs for teachers.
- Demonstrate the students of all aspects.
- Conduct different activities that can't be given by virtual learning through which student can enhance the imaginative skills.
- Organize awareness sessions specially for the girl's parents to reduce the dropout rate
- Conduct the quizzes and test to assess the learning
- Prepare a report for submission
- Plan periodical follow up for about a year with the help of NSS Volunteers.

Methodology, materials and financial resources:

Primary students are capable of perceiving and understanding information in their own comfortable intuitive methods. Some are inclined to grasp through visual learning others may learn through audit learning and few through kinesthetic learning. Restoring and strengthening all three variants of learning will enhance knowledge and information in them.

In virtual learning technology enable students to learn through multiple intelligences such as logical, linguistic, interpersonal, naturalistic, kinesthetical, visual-spatial, interpersonal and musical by means of different short videos, animations and games like identifying pictures, recognizing sounds, prominent people etc. Not just compromising to virtual learning we also like to bring real time objects to students which will empower cognitive and observation skills.

Estimated cost of Technology: 1.00 lakh

Outcomes of Project:

- To improve teaching and learning process in primary schools at rural development sector.
- To encourage and enhance community education in rural areas.
- Investigate new thoughts and evaluate new ideas and approaches in classrooms.
- Engage students to share their skills and achieve positive attitude in classrooms.
- Through this project, teachers can be benefited to explain subjects in virtual manner and help students to enhance their knowledge practically.
- After fruitful achievement of undertaking this project, primary school children can get virtualized learning which will help them to perceive basics and interesting concepts in mathematics, science, English and so on without complication by using virtual technology

PROPOSAL (TECHNOLOGY INTERVENTION)

Subject expert group: Department of Chemical Engineering, Anil Neerukonda Institute of Technology and Sciences (A) [ANITS], Visakhapatnam

Title of the work: Transformation of untreated water to potable water using low cost ceramic membranes

Village where it is to be implemented: Nammivanipeta village, Sangivalasa Post, Bheemunipatnam Mandal, Visakhapatnam Dist., Andhra Pradesh, Pin-531162.

Brief description of the problem: The municipal water supply to the village, Nammivanipeta still contains characteristics of odour and colour which is not utilized by the village people for drinking purpose. In view of this, the people used the water only for cleaning and cooking purposes. Further, the properly not treated water may cause various diseases for human beings which underlines the need for an enhancement of quality in the supplied municipal water. In other hand, the people of the village is scarce of ground water which seems to be yellow colour and also forms yellowish cake on the walls of cooking vessels when water is heated. Moreover, there is no other alternative source for these people for consumption and conservation and still rely on the municipal water supply for various household applications. Further, based on samples and information of people, the supplied water by the municipal corporation of Visakhapatnam need to be analysed in the laboratories of the Department of Chemical Engineering, ANITS for transformation to potable water using the laboratory fabricated ceramic membranes.

Need for Technology Intervention: The municipal water supply is the only source for drinking in the Nammivanipeta village. Also the same water supply has been used by the people for several years due to unavailability of another source of potable water. Further, it emits mud smell with translucent in nature. This might be the cause for many water borne diseases. Moreover, the same problem is witnessed in the survey of grama volunteers of this village. Eventually, this existed issue of the Nammivanipeta village has come to our Department of Chemical Engineering through the information of our staff who are residing in the vicinity of the village. So, the Institution and especially the Department of Chemical Engineering has taken up the issue as a challenge to resolve it with the help of management. Moreover, for drinking purpose, the people rely on commercial mineral water supply which is a burden to the common people in terms of cost. Therefore, there is a need to enhance the quality of the municipal supply water. This village is around one kilometre away from the college. So, the expert team of Department of Chemical Engineering of Anil Neerukonda Institute of Technology and Sciences (ANITS) studied the problem of supplied water and the same was explained to village people and the panchayat members/officials. Then the mitigation of the existed water supply problem may be solved using the laboratory fabricated low cost ceramic membranes which are the part of membrane technology. These low cost ceramic membranes are amicable for environment as well as good for the society in terms of giving potable water. The cost and efficiency of these membranes are proved in the reputed journals (Kaniganti et.al)

Cost for the infrastructure: Cost for the stainless steel mould, hand operated hydraulic press machine, batch reactor and manpower as well as power consumption for fabrication of ceramic membranes are Rs.10000, Rs. 25000, Rs.15000 and Rs.50000 respectively.

**Note: The students will work voluntarily for conducting experiments for analysis without motive of any profit.*

Role of the institute: The institute is planned to

- serve the society and industries with solutions for real/existed problems.
- arrange an expert consultant team which contains people who are versatile to solve/modify the problems with integration of various fields.
- encourage and motivate the people and grama volunteers to identify lacuna for solving the problems in the vicinity of the institute without expecting profit for the organization.
- render the information to members of the women of an accredited social health activist (ASHA) community, grama volunteers and people of the various villages and panchayats by the expert team to get awareness of the highlighted and anticipated problems.
- provide resolutions for engineering problems and the same is to be reported to grama sachivalayams of the state government.

Future prospects of the work:

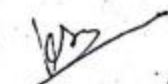

- Living ambience especially public health, potable water and proper sewage disposal will enhance.
- Sanitation at residential/industrial areas will pay the attention towards good health.
- Mitigation of water borne diseases with latest membrane technology.
- The specialized committee will anticipate and monitor the control of various issues.
- Illustrate an experimental setup and analysis of water to the people/leaders of various wards under any scheme related to Panchayat, State and Central Governments.

Availability of any other funding: No

Details of the funds collected from any other agencies: No

Duration of the work: 4 months.

Respected Sir,

We have received an amount of Rs. 50,000/- vide sanction letter cited in reference above under MHRD UBA(AISHE ID: C-24171) in 2019. This fund was utilized for survey of 5 adopted villages in the period Aug 2019 to April 2020. This utilization certificate was also submitted in March 2020 through post to IIT Delhi as per the guidelines of UBA. Later from April to September 2020 Covid-19 activities are taken up in five adopted villages.

In this regard, three proposals have been submitted in UBA official portal March 2020. These proposals are related to problems identified from the 5 adopted villages. So, we request you to kindly consider for the approval of the same.

- Proposal Titles: 1. Transformation of untreated water to potable water using low cost ceramic Membranes (added on date:- 2020-04-05 08:30:55).

Unnat Bharat Abhiyan is a flagship program of Ministry of Human Resource Development (MHRD) Govt. of India with a view to bring a transformational change in rural development by active participation of higher academic institutions with local communities and IIT Delhi is acting as National Coordinating Institute for Higher Educational Institutes as Participating Institutes in the country.

Under the UBA program all Participating Institutes are adopting a cluster of five villages in consultation with Districts Collectors. It is brought to your kind notice that under the Unnat Bharat Abhiyan, Anil Neerukonda Institute of Technology & Sciences, Sangivalasa, Visakhapatnam, has been registered and proposed the following villages in the Visakhapatnam for the same.

1. Sangivalasa
2. Thagarapavalasa
3. Thallavalasa
4. Chittivalasa
5. Nammivanipeta

In view of the above the project coordinator of the same is (Dr Ch. Anil, anil.chc@anits.edu.in, 9848119352) will contact your officer for the above purpose.

So we request you to permit us to work for above said villages.

Thanking you

Your Sincerely

(Prof. T. Subrahmanyam)

Sub: Requisition for approval of UBA proposals – Reg.

Ref: Letter dated on 13-03-2019 from Unnat Bharat Abiyan IIT Delhi.

Respected Sir,

We have received an amount of Rs. 50,000/- vide sanction letter cited in reference above under MHRD UBA(AISHE ID: C-24171) in 2019. This fund was utilized for survey of 5 adopted villages in the period Aug 2019 to April 2020. This utilization certificate have also submitted in March 2020 through post to IIT Delhi as per the guidelines of UBA.

In this regard, three proposals have been submitted in UBA official portal March 2020. These proposals are related to problems identified from the 5 adopted villages. So, we request you to kindly consider for the approval of the same.

Thanks and Regards.
